

# Cover up!

Ainsley Fraser draws the net over sheeting systems.

Commissioning a new vehicle without a so-called 'auto-sheet' system is hard to understand. Especially when you bear in mind the design maturity, functional benefits and safety factors associated with modern sheeting systems.

In addition to the range of integrated and automated options available from mainstream manufacturers as part of skip loader, hook loader and drawbar trailer specifications, there are specialist and aftermarket systems. These can be retrofitted onto a unit which is already in

service – or indeed a new unit purchased without one.

There are also a few semi-automatic systems, which raise the sheet roll on a mast behind the cab, and then require the operative to manually pull the sheet over the load.

Large waste bulkers – usually based on

New generation Power-Reach™ Skip loaders with Intacova™ – integrated innovation by design
